

Application for Budget Billing

Budget Billing is a great way to stabilize the seasonal fluctuations in your bill and to budget for utilities over the course of the year. It is available to year-round customers who pay their bills through our debit banking program. The way it works is simple:

- Your average utility bill for the past 12 months is calculated, and this becomes the amount of your bill for the next 12 months. The fuel adjustment fee will be factored into the equation.
- A true-up is calculated every 12 months, which results in a new average monthly debit for the next 12 month-period.
- In the event that you experience an unusually large change from your normal bill, the UC reserves the right to adjust your account.
- You must be on our debit banking program to qualify. Please fill out and sign this form, in addition to the debit banking program form.
